Corona Virus Science

This blog explains some of the science related to the corona virus (COVID-19) € perspective. Most posts contain links to the underlying research.

COVID-19 Model Projections

This page contains graphs with the latest COVID-19 projections for the US from the "Data Trend Model". Previous predictions can be downloaded from Github.

Please note that this model does not try to predict the effect of "re-opening". Since the model is based on extrapolation of trends in the last 2-3 weeks, any increases in COVID-19 cases from relaxed restrictions can take up to a month to be reflected in the predictions.

Last model run

May 29, 2020 with Johns Hopkins Data from 5/28/2020.

- **Predicted daily deaths on 7/27/2020: 637** (yesterday: 723 ~ 44,000 per 2 months)
- **Predicted daily cases on 7/27/2020: 12,450** (yesterday: 13,936)
- **Total deaths predicted by 7/27/2020: 154,908** (yesterday: 157,394 until 7/26)
- **Excluding New York & New Jersey: 108,323** (yesterday: 110,815 until 7/26)

Summary

Today's numbers are lower than yesterday's numbers. This weeks numbers differed from the usual weekly pattern by showing low counts for longer, which is probably due to the long Memorial Day weekend. Today's new case numbers (24,266) are higher than a week ago (23,790 on 5/22), which is inconsistent with a downward trend.

Total projected COVID-19 cases and deaths

Future growth in cases per day limited to 14 days.

— Total cases — Cases without NJ & NY — Total deaths — Total deaths without NJ & NY
