Corona Virus Science

This blog explains some of the science related to the corona virus (COVID-19) € perspective. Most posts contain links to the underlying research.

COVID-19 Model Projections

This page contains graphs with the latest COVID-19 projections for the US from the "Data Trend Model". Previous predictions can be downloaded from Github.

Please note that this model does not try to predict the effect of "re-opening". Since the model is based on extrapolation of trends in the last 2-3 weeks, any increases in COVID-19 cases from relaxed restrictions can take up to a month to be reflected in the predictions.

Last model run

May 8, 2020 with Johns Hopkins Data from 5/7/2020.

- **Total deaths predicted by 7/6/2020: 172,030** (yesterday:171.578 until 7/5)
- **Excluding New York & New Jersey: 124,514** (yesterday: 124,939 until 7/5)
- **Predicted daily cases on 7/62020: 20,181** (yesterday: 21,017)
- **Predicted daily death on 7/6/2020: 1,336** (~ 80,000 per 2 months)

Summary

Today's numbers are very similar to yesterday's, with a very light downward trend when taking into account that the forecast extends one day further.

Total projected COVID-19 cases and deaths

Future growth in cases per day limited to 14 days.
