Corona Virus Science

This blog explains some of the science related to the corona virus (COVID-19) € perspective. Most posts contain links to the underlying research.

COVID-19 Model Projections

This page contains graphs with the latest COVID-19 projections for the US from the "Data Trend Model". Previous predictions can be downloaded from Github.

Please note that this model does not try to predict the effect of "re-opening". Since the model is based on extrapolation of trends in the last 2-3 weeks, any increases in COVID-19 cases from relaxed restrictions can take up to a month to be reflected in the predictions.

Last model run

May 24, 2020 with Johns Hopkins Data from 5/23/2020.

- **Total deaths predicted by 7/22/2020: 158,205** (yesterday: 161,159 until 7/21)
- **Excluding New York & New Jersey: 110,536** (yesterday: 113,765 until 7/21)
- **Predicted daily cases on 7/22/2020: 13,120** (yesterday: 13,589)
- **Predicted daily deaths on 7/22/2020: 743** (yesterday: 828 ~ 45,000 per 2 months)

Summary

Today's numbers are lower than yesterday's. This is the first decrease after seven successive days of increases. Since reported case numbers usually are lower on Sundays and Mondays, the model has generally shown lower numbers on weekends and at the beginning of the week; last week was an exception to this rule.

Total projected COVID-19 cases and deaths

Future growth in cases per day limited to 14 days.

— Total cases — Cases without NJ & NY — Total deaths — Total deaths without NJ & NY
