Corona Virus Science

This blog explains some of the science related to the corona virus (COVID-19) € perspective. Most posts contain links to the underlying research.

COVID-19 Model Projections

This page contains graphs with the latest COVID-19 projections for the US from the "Data Trend Model". Previous predictions can be downloaded from Github.

Please note that this model does not try to predict the effect of "re-opening". Since the model is based on extrapolation of trends in the last 2-3 weeks, any increases in COVID-19 cases from relaxed restrictions can take up to a month to be reflected in the predictions.

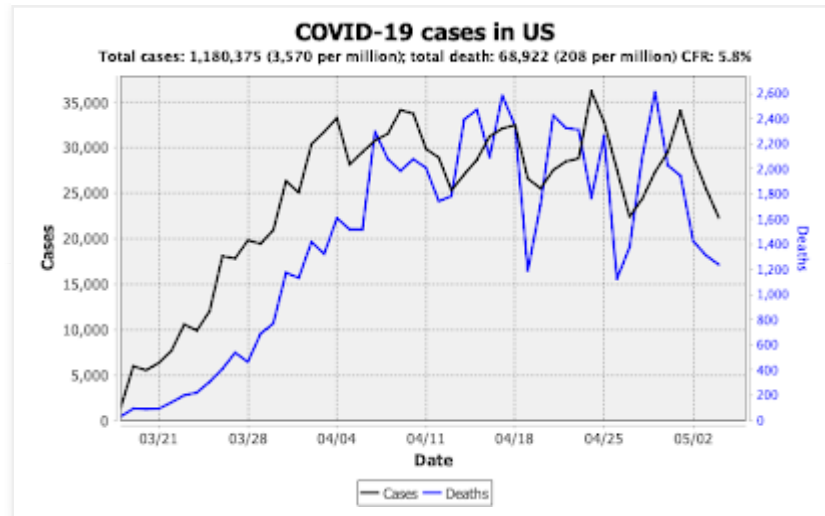

Last model run

May 5, 2020 with Johns Hopkins Data from 5/4/2020.

- **Total deaths predicted by 7/3/2020: 168,564** (yesterday: 169,721 until 7/2)
- **Excluding New York & New Jersey: 121,890** (yesterday: 121,820 until 7/2)
- **Predicted daily cases on 7/3/2020: 22,308** (yesterday: 21,954)
- **Predicted daily death on 7/3/2020: 1,415** (~ 86,000 per 2 months)

Summary

Overall, today's trend is similar to yesterday, with a small downward trend in predicted deaths that is primarily due to a drop in the predicted cases for New York. Once again, there was a pronounced "weekend dip" in the reported numbers:

Chances are we will see increased numbers of confirmed cases and deaths again for the next 3-4 days, which should raise the projections slightly.

Total projected COVID-19 cases and deaths

Future growth in cases per day limited to 14 days.
