

Corona Virus Science

This blog explains some of the science related to the corona virus (COVID-19) € perspective. Most posts contain links to the underlying research.

COVID-19 Model Projections

This page contains graphs with the latest COVID-19 projections for the US from the "Data Trend Model". Previous predictions can be downloaded from Github.

Please note that this model does not try to predict the effect of "re-opening". Since the model is based on extrapolation of trends in the last 2-3 weeks, any increases in COVID-19 cases from relaxed restrictions can take up to a month to be reflected in the predictions.

Last model run

May 11, 2020 with Johns Hopkins Data from 5/10/2020.

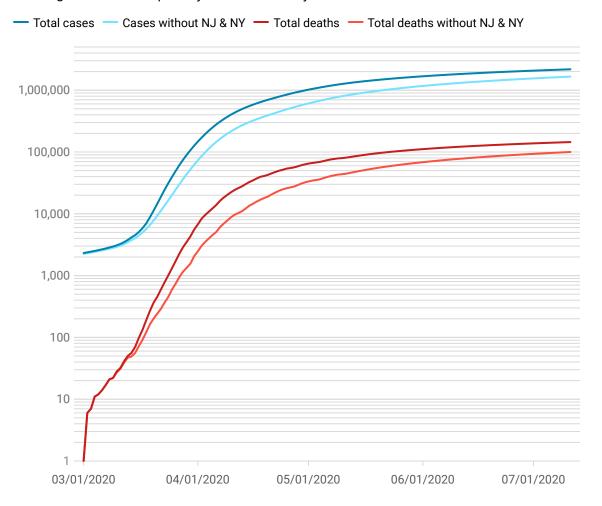

- Total deaths predicted by 7/11/2020: 144,761 (yesterday:145,761 until 7/10)
- Excluding New York & New Jersey: 100,028 (yesterday: 100,711 until 7/10)
- Predicted daily cases on 7/11/2020: 10,454 (yesterday: 11,088)
- Predicted daily death on 7/11/2020: 657 (~ 39,000 per 2 months)

Summary

Today's numbers show a small drop compared to yesterday. That's a bit unusual for mid-week numbers, which usually go up.

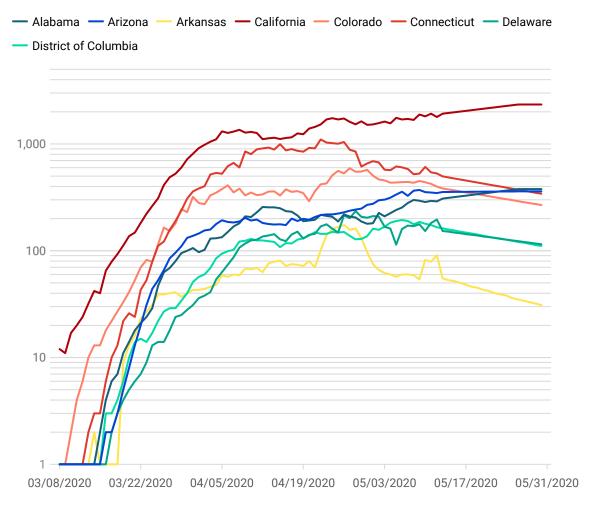

Total projected COVID-19 cases and deaths

Future growth in cases per day limited to 14 days.
